A Woman's View on the Ease of Using Auto-Rx[®] and the Surprising Better Gas Mileage

Testimonial from Barbara F. in Florida.....

I drive a 2003 Toyota Avalon that has just recently turned the 15,000 mark, so really still a new car, given the 200,000 plus miles that many Toyotas achieve for a lifetime. After the first year, my car started acting a bit sluggish. I really did not think much about it until a friend suggested Auto-Rx. I thought to myself, *If it will give my car a pick-me-up for \$25, count me in*, so I ordered Auto-Rx[®] and printed out the instructions and waited for it to arrive.

There is nothing rocket science about using this product. Take the oil cap off, pour the stuff in, and drive 1,500 miles. Even a 61-year-old widowed lady could use Auto-Rx[®] with no problems or a man to help her.

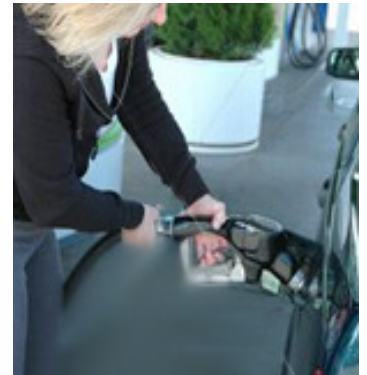

When I reached the end of the 1,500-mile wash cycle, I was off to the Toyota dealership for a regularly scheduled oil change, the only difference being that I asked for non-synthetic oil to be put in my car for this particular oil change. Having not been employed for the last two years, most of my driving was short trips around town and very little highway mileage, so I know it will take me some time to reach the 2,000-mile mark for the rinse cycle.

Well, I am now 500 miles into the rinse cycle and had to fill up my tank. To my surprise, I had a dramatic change in miles per gallon! **I had been getting almost 19 MPG on a regular basis, and to my utter amazement I had just gotten 26.9 MPG!** I know none of us are happy when we have to pull up to the pump and give our hard-earned money for high-priced gas, but we all have to pay, just the same. No gas, no car! I will be going back to work next week in a sales job that will require a lot more short-trip driving, translating into more trips to the gas pump.

If you happen to see a blond lady pumping this high-priced gas into her car with a smile on her face, it will be me, knowing **I am getting a lot better MPG for my buck!** If you have not tried Auto-Rx[®], may I strongly suggest you do so as soon as possible and see the results for yourself.

What do you have to lose? **You get a clean engine that all of a sudden has more pep.** You know your car will be staying out of the shop for longer periods of time, and you will see an increase in your MPG. To me, that is the cheapest win-win situation you can get in today's world!
